

## Summary

The Redesign document of the "Project Name" has been carefully revised with feedback from three peers. Moving through the process iteratively ensures that much of their feedback drives improvement into this document, especially how this feedback is presented and addressed. Reordering the list of feedback is most noted to give a clear and direct point of action. For example, feedback that used to signal the absence of "Alt Text for Images" has been escalated to point to larger situations, for example, "Missing Document Language," and how that actually refers to the need for the inclusion of language definitions in web documents.

With absolutely valuable insights drawn from peer reviews, "A list of 10 Feedback" has been reworked and updated meticulously. Every issue of the feedback was rewritten for a clearer and more informative overview of the problems. For instance, generic feedback has been converted into exactly one such as "Line 1: Missing Document Language"—a direct indication of the line that is the problem and what needs to be achieved. This, under the new format, will offer instant context and direction to proper correction so that the developers may easily understand and work in such a manner as to make the amendments easily achievable.

And now, completely redesigned, is the "Detail of 1 Feedback" section. We've shown the code and corresponding feedback side-by-side, so it becomes a whole lot more intuitive to understand what's going on. The code that should be reviewed has been colored red. Such a side-by-side comparison will help to pick up not only non-compliant code quickly but also serve as an assistant tool before raising the awareness of accessibility principles and how to deal with that kind of work.

On this homepage, users can acquaint themselves with the tool's objectives by exploring the links labeled "Project Name" and "About this project." They can then use the "Home," "Upload" or "Sign In" tabs on the website to browse around the website to start using the service, add items to be checked for compliance or log into their account. Lower down, there is more information on the company and support information for addressing any other issues or queries on the service.

On the left, the listing of files in your current working directory reveals identified issues that have not been following web accessibility standards. To the right of the display, for each of the accessibility issues, there will be a file "Sample.html" selected, which contains warnings about the missing alt text for images, non-descriptive link text, color contrast that does not follow web accessibility standards, etc. All of them are described shortly and have an arrow suggesting a more detailed explanation.

On this page, a user can click the "Click to select files" area to choose files from their computer that they wish to upload. After selecting the files, they would press the "Upload" button to submit them to the platform. The message "You have not uploaded any content previously" indicates that the user has not uploaded any files before, and the search bar at the top right allows for searching through previously uploaded content.

The user can interact with every project via "Action" buttons in order to view more information about them, edit, or delete the uploads. They may further upload new documents by clicking the link in the "Click to select files" section and then hitting "Upload. And, in the bottom part, it has a searching bar that can help search for something and allows the quantity of items to be changed that will be displayed by page according to your convenience.
